

Position: Product Manager for IoT Software System

To apply: Send brief cover letter & CV to: hr@kenzen.com

Company & Job Description:

[Kenzen's](#) mission is to keep workers in extreme conditions safe by preventing injuries with individualized physiological monitoring. Currently, our main focus is on solutions to keep workers safe from heat-related injuries and illnesses. This is accomplished through our wearable device that collects each individual's physiological data and delivers real-time alerts when workers are reaching unsafe core temperatures. Kenzen is currently expanding into continuous body temperature monitoring and illness detection as well.

As the Product Manager at Kenzen, you will bridge the engineering, design, data science, and commercialization teams to build the right product for the business. The major challenges of this position will involve 1) Bringing the Product from an MVP to a Commercially-viable system, and 2) Interfacing with dispersed teams to coordinate on Product specifications and timelines.

To do this, you will own the Software Development backlog and help prioritize feature development to support the Data Science and Hardware teams, while adjusting priorities based on feedback from Pilots and the Commercial Team. You will work side-by-side with the VP of Engineering, who has deep experience in Hardware Development and integrated systems.

Responsibilities

- Create wireframes and visual designs for new product features
- Define new product features for development and QA teams
- Maintain a development backlog for mobile, web, firmware, and backend development tasks
- Lead a QA team, conduct sanity tests, and facilitate application release process
- Maintain a Mixpanel instance to understand user interaction with products
- Work with commercial team to organize user interviews
- Lead weekly product meetings to update the team on development and understand new feedback from the commercial team

- Maintain Product Roadmap for near-term and long-term development

Qualifications

Minimum qualifications:

- 3-5 years as a Product Manager of software products
- Experience prototyping with Figma or Sketch
- Experience managing development projects with JIRA
- High-level understanding of backend architecture and constraints for mobile and web development
- Ability to help data science team define performance metrics
- Experience owning new features from conception to implementation
- Proven success in gathering, qualifying, and quantifying requirements from users and internal stakeholders
- Proven success in leading teams of contractors, including developers and QA personnel
- Willingness to learn the constraints of Hardware Development and Machine Learning, if you do not have experience in these fields
- Excellent written and oral communication skills

Preferred Qualifications

- Experience with wearables or IoT device products
- Ability to work in a start-up or fast-paced environment and pivot to new directions quickly.
- Experience with scaling a product through the MVP phase to large commercial roll-outs

Kenzen is an equal opportunity employer, and offers a competitive salary and benefits.

Employment type: Full-time
